KBr is transparent, especially in the mid-infrared region spanning from 2.5 mm to 25 mm wavelength i.e. equivalent to 4000 cm^{-1} to 400 cm^{-1} in terms of wavenumber

Samples are analyzed by grinding with powdered KBr (IR grade) and pressing into a disc.

KBr (IR) of desired optical purity is manufactured by repeated crystallization to remove all plausible contaminants.

Potassium Bromide (KBr) for IR & FT-IR

Certificate of Analysis IONEX Reference Material

531-RM

Art.Nr.: CL01.1221

Lot Nr.: 28.1980911

Lead standard solution 1000 µg/ml (Plasma HIQU)
1 g Pb / 12 to 5% HNO₃

Certified value: (978 ± 7) µg/g

Density: (1,02818 ± 0,00021) g/mL - 20°C

Certification and Traceability: The certified mass fraction shown above was achieved by method BM006 that uses the "High Performance ICP-OES" protocol developed by NIST. This value is traceable to the International System of Units (SI) via the value of the reference material NIST SRMs 3128, Lot: 101026. The certified density shown above was measured by method BM008 that uses either an oscillating densimeter or a pycnometer. This value is traceable to the International System of Units (SI).

Uncertainty: The reported uncertainty of the certified value is the expanded uncertainty with coverage factor $k=2$ corresponding to a level of confidence of about 95% estimated in accordance with GUM and EA-4/02 by procedures consistent with the requirements of ISO 17034 and ISO Guide 35.
